Wholesalers of HVAC Controls and Solutions since 1945

1 day programming class on “NEW” FX – PC”

FX- PC allows you to select and configure applications for the new field controllers.

September 20, 2011 9-4pm, \$300, 8 person limit

Add \$200 if you need the software, and come 30 minutes early to load it.

The course is designed to familiarize students with the new Facility Explorer product line. We will cover the system architecture, software, and programming process for the new field devices. Students will be trained on how to use the selection tool to program controls from the existing application library. All participants will develop a basic program, use the FX simulator to test their program, and download their program into a FX field device. At the end of this course students will be able to navigate through the software and develop basic programs.
