Wholesalers of HVAC Controls and Solutions since 1945

[Metasys HVACpro Training Class](#)

[8/31/10 11-6pm class held at our office- 30 Vineland St. Brighton, MA](#)

This class will focus on both the Metasys field devices and the software used with them. HVAC Pro is the software used to program, commission and troubleshoot many Johnson Controls application specific devices. We will teach you how to build a new application from scratch and how to service existing controllers. The class will concentrate on these common controls: TEC, TE67NT, UNT, VMA, unless there are other controls that you would prefer to practice using. We will have three laptop computers, fully loaded with software, available for your use during the class. The class will begin with a basic review of Direct Digital Control (DDC) fundamentals before we move into the Johnson Controls portion of the class. If you have specific questions, topics, or problems that you would like us to address than you are welcome to help us customize a syllabus that better meets your needs.

Reserve your \$150.00 seat today- Class is limited to eight people
