2 hour programming class on FX Supervisory controls

Learn to incorporate iPod friendly graphics on your station.

August 19, 2010 3:00 – 5:00 \$0.00 Reserve your seat today.

Do you or your customers use iPhones?

You can now access FX20/FX40/FX60/FX Server Supervisory Controller stations from an iPhone and iPod touch. The iPhone either uses the cellular phone network or a Wireless Fidelity (WiFi) connection to the Facility Explorer network. The iPod touch uses WiFi capability to communicate with the Facility Explorer network.

With the convenience of a wireless handheld device, you can:

- View devices, points, schedules, alarms, and graphics
- acknowledge alarms, command points, and modify schedules

- Set up a point alarm that notifies you via e-mail (with link in the message).

When your iPhone receives the alarm e-mail, you click the link to determine the cause of the alarm.

Incorporate graphics that are sized and arranged for optimal display on the 3.5-inch touch screen!
